

Dear Parent,

Re: Measles, chicken pox, mumps and shingles

We kindly ask for your co-operation in this important matter concerning the health of one of our pupils at our nursery/school, who is currently receiving medical treatment. This treatment means that their immune system is low which puts their health at risk if they are exposed to measles, chicken pox or shingles.

Please let us know immediately if your child is suspected of having measles, chicken pox or shingles. We will then be able to determine whether there has been significant contact with the pupil in question and can inform their family. This will allow their medical team to arrange for the child to receive any relevant medication they may require.

Please do not send your child to nursery or school if they experience vomiting/diarrhoea and keep them off school for 48 hours after their last episode.

There is no risk at all for your own child from this situation. However, the health and wellbeing of our pupil undergoing treatment is at risk. I hope you can help us with your cooperation and commitment in making sure that we are told as soon as possible.

Thank you so much for your help with this.

Louise Delargy
